PROJECTS

Aircraft Tracking on Border Defence Using Deep Learning in Video Surveillance.

Description

This research proposes a deep learning method for classifying border protection mechanisms, aiming to automatically identify border defense equipment using photos and sensor data. The method uses recurrent neural networks and convolutional neural networks for optimal performance.

Identification Of Healthy And Unhealthy Food With Calories Using CNN.

Description

This project uses transfer learning techniques and Convolutional Neural Networks to classify food images on an Indian food dataset, demonstrating improved performance through data augmentation and fine-tuning hyper parameters.
